SNAP-ON® & PYTHON® WORKING TOGETHER

**SNAP-ON INDUSTRIAL EXPANDS ITS TOOLS AT HEIGHT OFFERING
THROUGH PARTNERSHIP WITH PYTHON SAFETY**

Snap-on Industrial has partnered with Python Safety to expand the tool company's offering of its Tools at Height product line.

Python Safety, the leading provider in Fall Protection for Tools™ for the utility and construction industries, will be adding tool belts, lanyards, holsters, pouches and bags to Snap-on Industrial's Tools at Height product line.

Tools at Height is Snap-on Industrial's tethered tool program designed for applications that involve work being performed at height and anywhere dropped or lost objects are a concern; the tools are tethered to prevent them from being dropped. All tools are designed with a tethered system to maintain or enhance the tools functionality when used at height or near critical assemblies. Tools at Height service kits are available as well for most applications. They are outfitted with lanyards and other devices to fully secure them and incorporate Snap-on Industrial's Level 5 Tool Control System.

The partnership with Python Safety perfectly complements the Tools at Height product line and reflects the quality found in all Snap-on Industrial tools and equipment.

"Python Safety is an excellent fit with the Snap-on Industrial family of products," said John Martell, Snap-on Industrial product manager. "The company's brand recognition among numerous tradecraft, strict adherence to quality and focus on safety align nicely with the principles Snap-on espouses for Tools at Height."

Industry regulations exist for the protection of people from falling, but no such guidance exists for protecting individuals from dropped objects, the fourth highest cause of death in the workplace. Snap-on Industrial's Tools at Height program, teamed with Python Safety's solutions, uniquely address this critical gap, offering both safety and productivity.

"Python Safety is proud to partner with Snap-on Industrial," said Mark Caldwell, chief executive officer, Python Safety. "Snap-on's growth and continued focus on the Tools at Height product line further emphasize the opportunity we feel is tremendous – to keep workers in any tradecraft safe from dropped tools."

FEATURES & BENEFITS

PYBKT180HLV

PYTH2H1X72HD

Dual action “twist and pull lock” carabiners, featured on Safe Buckets and Heavy Duty Extensions, are load rated for 6,700 lbs.

PYTWBL

PYTWBM

PYTWBS

Elastic Pullaway Wristbands do not come off when a tool is dropped, but the operator can “pull out” of the wristband if needed, making them perfect for use near rotating equipment.

PYTBELTRIGNC

PYTWBADJNC

PYTEXT5X12NC

Non-conductive products provide increased safety for electricians.

Fall Protection for Tools™

FEATURES & BENEFITS

High quality, load rated carabiners are used on coil tethers. These feature screw gate closures to prevent accidental opening. They also feature Coil-Lock rings that prevent the carabiner from being separated from the tether. Use this type of tether when working near heat.

PYTH2HCOIL

PYTEXT5X12V

Vinyl/vinyl coated products are made to wipe clean and are used in applications like nuclear power plants and clean rooms where decontamination is needed. They can also be used in oily environments like oil and gas refineries, and in environments that use hydraulic fluid like aviation.

Holsters are designed with built-in attachment points or retractors. That means the tools are tethered to the holster at all times so the risk of dropping a tool while transferring from bag to lanyard is eliminated. It also means the system is completely modular and can be arranged in any order on a tool belt or climbing harness based on the user's preference. Several holsters also feature hook and loop flaps that secure the tool while being transported.
